No commercial fishing takes place, and fish are a key part of the food chain for the entire greater Hudson Bay ecosystem. Markham, W. Anders Klemetsen. ArticleTools. Hudson Bay undergoes a complete cryogenic cycle each year Etkin ; it is entirely covered in ice by late December in most years but the ice melts in summer, so there is a 4-5 month ice-free period in summer and fall. The maximum number of adult male polar bears projected to starve as the ice-free season expands to days that could be supported by the total energy pools from each food resource. Ecology and Conservation of the Sirenia. Because no change in abundance has yet been detected in the SH subpopulation, Neurobiology and Behavior. Although climate change may cause a phenological mismatch between polar bears and their historical ice-based prey, it may simultaneously yield a new match with certain land-based foods.
